¹ Returns for periods less than one year are not annualized.

² Performance is shown for the class of shares with the longest track record. If there are multiple share classes with the same inception date then performance represents the share class with the highest expense ratio. In cases where the share class with the longest track record has lower expenses, the performance of share classes with higher expenses would result in lower performance than that shown.

³ Style box placement is based on Fund's principal investment strategies. It does not necessarily represent the Fund's current or future portfolio holdings.

⁴ Weights may not equal 100% due to rounding.

⁵ Mention of a specific security should not be considered a recommendation to buy or a solicitation to sell that security. Holdings are subject to change.

Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the Portfolio may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 877.435.8105 or visiting hardingloevnerfunds.com.

The Portfolio's investment objectives, risks, charges and expenses must be read and considered carefully before investing. The statutory and summary Prospectuses contain this and other important information about the investment company. They may be obtained by calling toll free 877.435.8105, or visiting hardingloevnerfunds.com.

Definitions

Alpha: Alpha is a measure of performance on a risk-adjusted basis. Alpha takes the volatility (price risk) of a security or mutual fund and compares its risk-adjusted performance to a benchmark index. The excess return of the security or fund relative to the return of the benchmark index is a fund's alpha.

Beta: Beta measures the relationship between the portfolio's excess return over T-bills (representing a risk-free rate) relative to the excess return of the portfolio's benchmark. A low beta does not imply that the portfolio has a low level of volatility; rather, a low beta means that the portfolio's market-related risk is low. Beta is often referred to as systematic risk.

Downside Capture Ratio: The downside capture ratio measures a manager's performance in down markets relative to a particular benchmark. A down market is one in which the market's quarterly (or monthly) return is less than zero. For example, a ratio of 50% means that the portfolio's value fell half as much as its benchmark index during down markets.

Earnings Per Share (EPS): Earnings Per Share (EPS) is a company's profits per share of common stock.

Information Ratio: The information ratio (IR) measures a portfolio manager's ability to generate excess returns relative to a benchmark, but also attempts to identify the consistency of the portfolio manager. The higher the IR, the more consistent a manager is.

Market Capitalization: This figure represents the current stock-market value of a company's equity. It is calculated as the current share price times the number of shares outstanding as of the most recent quarter.

Price/earnings Ratio (P/E): Price/earnings (or P/E) ratio is a comparison of the company's closing stock price and its trailing 12-month earnings per share.

Sharpe Ratio: The Sharpe ratio is calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better the portfolio's historical risk-adjusted performance.

Standard Deviation: Annualized standard deviation is a measure of the dispersion of a set of data from its mean. The more spread apart the data, the higher the deviation. Standard deviation is calculated as the square root of variance.

Tracking Error: Tracking error measures the standard deviation of the excess returns a portfolio generates compared to its benchmark. If a manager tracks a benchmark closely, then tracking error will be low. If a manager tracks a benchmark perfectly, then tracking error will be zero.

Upside Capture Ratio: The upside capture ratio is a measure of a manager's performance in up markets relative to a particular benchmark. An up market is one in which the market's quarterly (or monthly) return is greater than or equal to zero. For example, a ratio of 50% means that the portfolio's value increased half as much as its benchmark index during up markets. Market prices of investments held by the Fund may fall rapidly or unpredictably due to a variety of economic or political factors, market conditions, disasters or public health issues, or in response to events that affect particular industries or companies

The Portfolio invests in foreign securities, which will involve greater volatility and political, economic, and currency risks and differences in accounting methods. It also invests in emerging & frontier markets, which involve unique risks, such as exposure to economies less diverse and mature than the U.S. or other more established foreign markets. Economic and political instability may cause larger price changes in emerging & frontier markets securities than other foreign securities. Investing in participation notes involve the same risks associated with a direct investment in the underlying security, currency or market.

The Morningstar Analyst Rating should not be used as the sole basis in evaluating a fund, involves unknown risks and uncertainties which may cause the Manager Research Group's expectations not to occur or to differ significantly from what they expected, and should not be considered an offer or solicitation to buy or sell the fund.

The Morningstar Analyst Rating™ is not a credit or risk rating. It is a subjective evaluation performed by various Morningstar, Inc. subsidiaries ("Manager Research Group") which, in the U.S., is Morningstar Research Services LLC, registered with and governed by the U.S. Securities and Exchange Commission. Funds are evaluated based on five key pillars - process, performance, people, parent and price - to determine how they may likely perform relative to a benchmark over the long term on a risk-adjusted basis. The Analyst Rating scale is Gold, Silver, Bronze, Neutral, Negative. A rating of Gold, Silver or Bronze reflects the expectation of a fund's prospects for outperformance. The expectations and methodologies differ between active and passive funds. Analyst Ratings ultimately reflect the Manager Research Group's overall assessment, are overseen by an Analyst Rating Committee, and are continuously monitored and reevaluated at least every 14 months. For more details about Morningstar's Analyst Rating, including its methodology, go to <https://global.morningstar.com/managerdisclosures/>
